# Sky wing

A total speed digital from ordinary perm to setting perm

The digital revolution, now it is time of a total function  
From 50 degree to 150 degree of high temperature

**A true brand product for hair care specialists**

- Shorten the operation time in half
- setting perm with ultra high temperature of 150°C
- The extremely damaged hair would use the clinic acid perm
- The coating perm uses the ceramide acid perm
- The general perm is at the low temperature of 50°C

Caution: For acid operation perm that the operation time is reduced for 1/2, make sure to use only the acid perm products. (Hair damage may be severe when using the general alkali perm products.)

United functions and structures of digital perm equipment and setting perm equipment

Designed from customers point of view and manufactured with customers mind

**Sky Wing (Setting Function 1)**

- Put rod line into the groove of the wing to fix and control its height easily
- Rod line comes down from the upper side to connect rod easily

**Rod hanger (Setting Function 2)**

- It makes rod leveled off when rod line is tied up to the wing

**Control Panel**

- One-touch function : It works right after you push the operation button as temperature and time are already set. [strong hair(setting permanent wave), healthy hair, damaged hair, extremely damaged hair]

- One pin DC Plug Rod : It easily links rod and rod line
- Rod with charcoal powder : It emits a negative ion and far infrared ray
- Rod thermotherapy rubber : It makes you to confirm the heated rod with naked eyes

- One pin DC connector way
- A skid-proof hump when rod line is pulled out of rod

- Rod Support : It prevents heat damage to hair from rod
- Use rod support and tongs in the same way the picture left presents

# Speed Digital Perm

# Anion Speed Perm

With the injection of anion and O<sub>3</sub>, all operation is quickly completed!

## Efficacy of anion

- 200,000 or more of anion is released.
- It adds the moisture protection effect and shining to your hair.
- Prevent the damaged hair with the self-cleaning effect of anion
- Neutralizing effect for toxicity
- Maintaining the shining hair and waves
- Optimal condition of color and clarity by ion

World-biggest-size transparent hood style for long hair

Ozonized wind finishes long hairdo immediately with temperature range from cold to 65 degrees C

## Main operation

- Dry and intermediate dry
- Straight perm
- Softening of curly hair
- Ozone dyeing and decolorization
- Ion ceramic coating
- Finishing dry and scalp ozone clinic

## Artificial intelligence system

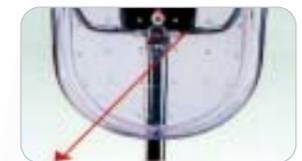

- Artificial intelligence system
- Powerful cold and hot wind of dry for 8 minutes
- Long hair straight-perm for 8 minutes
- Terrible curl emulsion and intermediary drying for 8 minutes
- Hair, scalp and dandruff removal clinic
- Cold and ozone wind coating finish

## Differentiated functions

- We save your labor cost for one person by having the powerful cold and hot wind dry function that replaces the cumbersome work of using the hand dry for hair.
- The heat and wind penetrates entire scalp to operate quickly without damages for long hair and, with the powerful ozone efficacy, it quickly completes even more perfect clinic operation in perm, dyeing, decolorization or coating.

# Ozone Speed Perm

<< wind controller

### Main operation

- Simultaneous completion of perm and dye (28 minutes)
- Producing stain-free and clear color and elastic wave
- Complete ion clinic dyeing in 10 minutes
- Complete the no panel straight (30 minutes)
- Completed softening of curly hair + clinic (15 minutes)
- Hair implanting effect with treatment and dandruff removal
- Facial massage + pimple treatment effect

### Raw herbal plant release function

For making the perm dye, the injector with the raw herbal plant (ginseng, mugwort, Angelica) is loaded onto the mist ball cap to inject various nutrition component and scent to penetrate deep into the damaged hair to make even more outstanding clinic effect, and in particular, it cleans the air in the business premises and removes the perm smell to bring the great natural scent for customers.

### Raw herbal plant (ginseng and mugwort) injector

- Attaching on rotational injection
- Attaching on cap

### What is Ozone Clinic Perm?

This is the new menu clinic perm technique that injects the mist containing the nutrition ingredient and natural scent of the raw herbal plant (ginseng, mugwort, Angelica) to the damaged hair that the insufficient moisture and other substances are deeply penetrated in the damaged hair to treat the damaged hair, and the ozone function removes the alkali residue ingredient to make the damage free hair style.

auto rotation spraying

## Pro Mist Ball

### Functions of 4 ultrasonic transducer

The existing product has 1-2 mist generating ultrasonic transducers but this product loaded 4 ultrasonic transducer for more enriched mist volume with more finite moisture particle size, the core part of the damaged hair clinic, that warm mist would have even more finite injection that it is visibly not seen.

- 4 ultrasonic transducer
- : Structure without boiling water

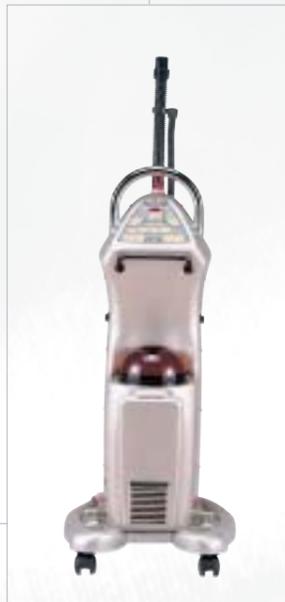

### World First Patent Application World first 360 auto rotation spraying

- World first raw herbal plant for ozone release function
- Possible to work on two persons at the same time
- Generating warm mist without boiling water [The moisture particle is too small to see it in naked eyes (3 micron)]

## Mist Ball

- 2 ultrasonic transducer
- : Structure without boiling water

## Steam Ball

### Functions of Steam Ball

- Attach two ultrasonic transducer
- One person operation function
- Boil the water to have the warm steam and warm mist (well visible for it has large and significant moisture particle volume)

- 2 ultrasonic transducer
- : Structure with boiling water

# Anion ice

Increase the sales with the new concept

Meeting of highly warm wind + ice wind  
It brings the differentiation of business

### Anion hot and cold functions and features

- Perm and magic : complete the curl with bouncy and volume
- Coating and manicure : Crystal clear coating
- Dyeing and decolorization : Color and clarity are assured
- Treatment : Maximize the clinic effect of the damaged hair
- Forming of shiny hair and elastic wave
- Coating functionality that is 10 times or more powerful than cold towel

### What is anion ice hot and cold system?

When perm, dye, or coating, when operating for highly warm wind of 60°C and ice of -1°C, massive oxygen mist is formed to penetrate into the hair along with the anion, and the cold ice is cooled and contracted momentarily for cuticle and close to prevent the release of nutrition and melanin color, and form the crystal clear and firm coating membrane on the hair to bring the elastic curl and clean color for 2-3 times stronger.

- Highly warm wind of 60°C and ice of -1°C function, Release of massive anion, bouncy hair!
